

# Campus Placements, Engineered.

One connected platform where students practice, compete and interview — and where colleges and hiring teams turn that readiness into real placements. This guide explains what the product does, how it fits together, and how to talk about it with a client.

# What is CodeGen Box?

CodeGen Box is an all-in-one placement readiness platform. It gives students a real practice arena, competitive contests, and AI-powered mock interviews with instant feedback — and gives colleges and hiring teams the tools to run placement drives, track student readiness, and discover talent, all in one connected system.

①

## Practice & Compete

A real problem-solving arena with instant, accurate code execution and weekly rated contests.

②

## AI Mock Interviews

Voice-based interviews scored instantly by AI, plus a full 3-round Final Interview simulation.

③

## Placement Drives

Colleges run recruitment drives end-to-end; students apply and track status in one place.

④

## Talent Pool Hiring

A searchable, consent-based marketplace where companies discover and hire ready candidates.

# Who It's For

Three sides of the same platform — every dashboard is built for a different job, but they all feed the same connected system.

## Students

Practice for free, compete in rated contests, take AI mock interviews, and get discovered by recruiters — whether they're at a partner college or joining independently.

## Colleges & TPOs

Onboard an entire batch in minutes, track every student's real readiness, and run placement drives without spreadsheets.

## Companies & Recruiters

Post drives, run AI-scored interview pipelines, and hire directly from a pool of verified, ready candidates.

# One Platform, Three Sides, One Loop

Every dashboard feeds the same system — nothing lives in isolation. This is the flow to walk a client through.

Companies also map drives back to colleges directly — the loop closes both ways.

## A Single Student's Journey

From onboarding to being hired — the path every student walks through the product.

### Student Dashboard

Practice, contests, AI interviews, drives and readiness — everything one student needs, in one login.

### TPO / Placement Cell Dashboard

The whole batch's readiness, section-wise reports, and every drive the college is running.

### Company Hiring Dashboard

Drives, AI interview pipelines, and the Talent Pool — everything a recruiter needs to hire.

# The Student Dashboard

Everything a student needs to prepare and get placed, in one place — no separate judge, no separate interview tool, no spreadsheet.

- 
- **Dashboard Home**

A snapshot of rating, streak, Readiness Score, and the next best action to take — updated in real time.
- 
- **Practice Arena**

A large catalog of problems across Easy, Medium and Hard, with instant, real code execution (not a simulated grader) and topic-by-topic mastery tracking.
- 
- **Contests & Rating**

Weekly rated contests and a star-based competitive rating system, with global and college-wide leaderboards.
- 
- **AI Mock Interviews**

Voice-based interviews across technical, behavioral, HR and aptitude questions — scored instantly by AI, with specific, readable feedback on every answer.
- 
- **The Final Interview Track**

A realistic 3-round simulation (Screening → Deep Technical → Final/HR) that mirrors how real companies interview — students automatically advance to the next round once they clear the last.
- 
- **Placement Drives**

Every drive their college has opened to them, with instant eligibility checking (CGPA, backlogs, branch) and one-click applications.
- 
- **Performance Reports**

A complete report of solved problems, accuracy, topic mastery and readiness — downloadable as a PDF to share with mentors or family.
- 
- **Profile & Talent Pool Visibility**

A recruiter-ready profile — bio, resume, links, skills — that determines how visible they are to hiring partners browsing the Talent Pool.
-

# One Honest Number, Not a Guess

The Readiness Score is a 0–100 number that tells a student — and their college — how prepared they really are for placements. Unlike a GPA, which says nothing about whether someone can solve a problem under pressure or hold their own in an interview, it's built from what a student actually **does** on the platform.

## Interview Performance

35%

How well they've done in recent AI-scored mock interviews — the single biggest factor, because a strong interview is the most direct proof of real readiness.

## Contest Rating

20%

Their competitive coding rating from rated contests — the same style of rating system used by top competitive programming platforms worldwide.

## Practice Depth & Breadth

20%

How much of the problem catalog they've covered, across difficulty levels and topics — rewarding well-rounded preparation, not just problem count.

## Consistency

15%

Whether they're practicing regularly, not just cramming once and stopping.

## Academic Standing

10%

CGPA and backlog status — still counted, since some recruiters do apply cutoffs, but no longer the dominant factor the way it once was.

### FOR STUDENTS

A clear, actionable number — plus specific next steps ("take a mock interview," "solve more Hard problems") instead of a mysterious score.

### FOR COLLEGES

An honest, at-a-glance view of which students are truly placement-ready, so TPOs can focus support where it's actually needed.

### FOR COMPANIES

A trustworthy pre-screen — a high Readiness Score reflects real, demonstrated skill, not just a line on a resume.

# The Placement Cell Dashboard

Everything a Training & Placement Officer needs to run an entire batch's placement season — without spreadsheets.

- 
- **Roster Onboarding**

Bulk-import an entire batch — hundreds of students — in minutes, with roll number, branch, CGPA and section all mapped in one go.
- 
- **Cohort Dashboard**

Every student's Readiness Score, rating and drive eligibility in one sortable, filterable table — the single source of truth for the placement cell.
- 
- **Section-Wise Delegation**

Assign Section Coordinators to manage subsets of students, with performance and reports automatically broken down by section.
- 
- **Placement Drive Management**

Create and run drives end-to-end — set eligibility rules (CGPA, backlogs, branch), map them to the batch, and track applications.
- 
- **Weekly At-Risk Alerts**

An automatic email flags students falling behind on readiness, so the placement cell can step in early — before it's too late in the season.
- 
- **Proctored Assessments**

Fullscreen enforcement, tab-switch detection and an automatic lockout policy keep placement tests fair for every candidate.
- 
- **Downloadable Reports**

PDF and Excel exports of readiness, section performance and placement outcomes — ready for internal records or a management review.
-

# The Hiring Dashboard

A direct line to verified, ready candidates — whether hiring through a college drive or sourcing independently.

## Post Placement Drives

Define the role, CTC and eligibility criteria, then reach exactly the colleges and students that qualify.

## AI Interview Pipelines

Run structured, multi-round interview pipelines with instant AI scoring — a human reviewer can always view and override any result.

## The Talent Pool Marketplace

Search and filter a pool of consenting, ready candidates by skill, rating and Readiness Score — even outside of a specific drive.

## Direct Outreach & Hiring

Message, shortlist and move candidates through a hiring pipeline, all inside the same dashboard.

## Verified Signal

Every candidate's rating, Readiness Score and interview history is real and platform-verified — never self-reported.

**The pitch to a hiring client:** instead of sifting through hundreds of resumes, a recruiter searches a pool of candidates who have already proven themselves — with a real rating, a real interview score, and a real practice history behind every profile.

# Why the Numbers Can Be Trusted

Every metric on the platform is designed to be real, verifiable, and fair — this is the part that makes a client's placement outcomes defensible.

## Real Code Execution

Every submission actually compiles and runs against real test cases in an isolated environment; nothing is simulated or estimated.

## Proctored Environment

Fullscreen enforcement, tab-switch and dev-tools detection, with an automatic lockout after repeated violations during assessments.

## Verified Identity

Phone number verification via one-time password, so every student profile belongs to a real, reachable person.

## Transparent AI Scoring

Every AI interview score comes with specific, readable feedback on each answer — never a black-box number with no explanation.

## Human Oversight, Always

AI scores instantly so students never wait, but a human reviewer can view and override any interview result at any time.

## Consent-Based Discovery

A student only appears in the Talent Pool marketplace if they've opted in; nothing is shared with recruiters without their consent.

**The pitch to a college or company:** every score on this platform is earned, not claimed — which is what makes it something you can actually put your name behind in front of a placement committee or a hiring panel.

# What Each Audience Pays For

Three separate plan tracks — one per audience. Individual plans are self-serve; institution and hiring plans are set up by our team.

## INDIVIDUAL — for students, self-serve

| PLAN               | PRICE                      | WHAT'S INCLUDED                                                            |
|--------------------|----------------------------|----------------------------------------------------------------------------|
| <b>Coder</b>       | <b>Free</b>                | 1 practice problem/day, 1 AI mock interview/day, no placement drive access |
| <b>Expert</b>      | <b>₹399/mo · ₹3,999/yr</b> | Unlimited practice, 3 AI mock interviews/day, full placement drive access  |
| <b>Grandmaster</b> | <b>₹799/mo · ₹7,999/yr</b> | Unlimited practice, 10 AI mock interviews/day, full placement drive access |

## INSTITUTION — for colleges, sales-assisted

| PLAN                       | PRICE               | WHAT'S INCLUDED                                                           |
|----------------------------|---------------------|---------------------------------------------------------------------------|
| <b>Standard</b>            | <b>₹1,49,000/yr</b> | Up to 500 student seats, full practice & contest access, TPO dashboard    |
| <b>Pro Campus</b>          | <b>₹4,49,000/yr</b> | Up to 2,000 seats, branch-wise analytics, custom drives, priority support |
| <b>Academic Enterprise</b> | <b>Custom</b>       | Unlimited seats, multi-campus, dedicated success manager, custom SLA      |

## HIRING — for companies, sales-assisted

| PLAN                  | PRICE               | WHAT'S INCLUDED                                                                             |
|-----------------------|---------------------|---------------------------------------------------------------------------------------------|
| <b>Hiring Starter</b> | <b>₹99,000/yr</b>   | Drive posting, AI interview pipelines and Talent Pool access, scaled to entry hiring volume |
| <b>Hiring Growth</b>  | <b>₹2,99,000/yr</b> | Everything in Starter, sized for higher-volume hiring across multiple roles and drives      |

Every student on a college's Institution plan gets that plan's access for free — an individual plan only applies when a student has no active college coverage.

# Why CodeGen Box Wins the Conversation

## One Platform, Not Five Tools Stitched Together

A judge, a contest engine, an AI interviewer, a placement tracker and a hiring marketplace — usually five separate tools. Here, they're one connected system, so nothing falls through the cracks between them.

## Signal a Recruiter Can Actually Trust

Ratings, interview scores and the Readiness Score are all earned on the platform, not self-reported — which is exactly what makes them useful to a hiring team.

## Built for the Whole Loop

Practice → interview → apply → get discovered → hired. Most tools solve one step of this; this product is built to carry a student through all of it.

## Fair by Design

Proctoring, verified identity and transparent AI feedback mean every result — a rating, a score, a shortlist — is one a college or company can stand behind.
