aptRun

OCTOBER 2026 · FEATURE GUIDE

AptRun Feature Guide

Everything students, colleges and hiring partners can do on AptRun, explained in simple tables.

Students

Practise, compete, interview, learn and track readiness.

Colleges

Onboard the batch, run mocks and drives, download reports.

Hiring Partners

Post roles, test, interview and hire from campuses.

Prepared for colleges and placement teams.

AptRun is a product of Mellow Vault, a unit of Prayukti Development Private Limited.

About this guide

AptRun helps colleges prepare every student for placements and helps companies hire from campuses. This guide lists every feature, one table per area, for the three groups who use it. Each table has three columns: the **feature**, **what it does** in plain words, and **good to know** (limits, rules and numbers). Part 4 covers rules shared by everyone. The guide describes AptRun as of October 2026; features and limits may be improved over time.

Who does what, at a glance

Area	Students	Colleges	Hiring partners
Coding practice (19 languages)	Practise and submit; instant results	Sees every student's progress and submitted code	—
Contests and coding tests	Join rated and mock contests	Creates mock contests, reviews ranks	Creates coding assessments, ranks candidates
AI mock interviews	Take them; AI score and feedback	Creates, reviews, overrides scores	Creates, shortlists, reviews, overrides scores
Soft Skills tests	Take them; instant results	Creates and publishes	Creates for partner colleges
Learning Centre	Vocabulary, listening, speaking, reading	—	—
Placement Readiness Score	Sees own score and next steps	Sees every student's score and tier	—
Reports and downloads	Performance Report (PDF)	7 reports, cohort Excel, weekly email	Hiring report (Excel)
Getting people in	Self sign-up or college login	Spreadsheet import, coordinator logins	Add or import candidates
Campus drives	Check eligibility, prepare, follow status	Approve or create drives, track offers	Post openings, propose to colleges
Fair-play monitoring	Proctored with warnings	Reviews flags, reinstates	Reviews flags on own tests
Talent Pool	Opt in to be seen	—	Browse, contact and hire
Hackathons and Project Lab	Join hackathons, build projects	—	Host hackathons
Plans and limits	Free plan, or covered by the college licence	One licence covers every student	No plan limits

PART 1

For Students

Everything a student can do on AptRun: practise coding, take contests and AI mock interviews, build communication skills, track placement readiness and follow campus drives - all in one place.

1

19	100	160	24
programming languages	point Placement Readiness Score	vocabulary words in 8 decks	listening lessons

Getting started: account and profile

How a student joins, signs in and sets up their profile.

Feature	What it does	Good to know
Creating an account	A student either signs up free on their own, or the college adds them and AptRun emails a login.	Students who sign up on their own are not linked to any college. Students added by a college appear in that college's reports.
First sign-in (college-added students)	The student confirms their email with a 6-digit code and chooses their own password.	The emailed password works only once. Code is valid for 10 minutes. New password needs 8+ characters.
Sign in and forgot password	Sign in with email and password. A forgotten password is reset with a 6-digit code sent by email.	Reset code is valid for 10 minutes. Too many wrong attempts pause sign-in briefly. Blocked accounts cannot sign in.
Quick set-up wizard	A short, skippable 3-step pop-up on first visit: main coding language, experience level and goal, and weekly practice pace.	Answers pre-select the code editor language and set weekly goals. The college can compare what the student says with what they really practise. Can be changed later in Settings.
Profile	Name, public handle, photo, short bio, LinkedIn and GitHub links, up to 20 skills and a PDF resume.	Photo: JPG/PNG/WebP up to 2 MB. Resume: PDF up to 5 MB. This is what hiring companies see in the Talent Pool.
Phone verification	The student verifies a mobile number with a 6-digit SMS code.	Adds a verified badge and counts towards profile completion.
Profile completion meter	Shows how complete the profile is and what to add next.	Resume 25, LinkedIn 15, verified phone 15, 3+ skills 15, GitHub 10, photo 10, bio 10 = 100.
Academic details	Roll number, branch, CGPA and backlogs are shown on the profile.	Set by the college; students cannot edit them. They decide drive eligibility and add to the readiness score.
Security and comfort	Change password, see signed-in devices and sign out of others, choose light or dark theme, jump to any page with Ctrl/Cmd + K.	

Home dashboard, readiness score and reports

A student's own scoreboard. Every number comes from real activity.

Feature	What it does	Good to know
Overview home page	Greeting, a "what's next" card (live or upcoming contest, or the college's next placement drive with a countdown), and the tiles below.	Rating, global rank, problems solved, current streak.
Placement Readiness Score	One score from 0 to 100 showing how placement-ready the student is. It is the same score the college's placement cell sees.	**Placement Ready** 75+, **In Progress** 45-74, **Needs Training** below 45. Gives up to two next-step tips.
Weekly goals	Progress bars for problems solved and hard problems solved this week.	Casual 10 (2 hard), Steady 20 (5 hard), Intense 35 (10 hard). Week starts Monday.
Rating progression	Chart of the student's contest rating after each rated contest, with peak and distance to the next star.	Shows "Unrated" until the first rated contest.
Focus areas and topic mastery	Lists the weakest topics and, per topic, problems solved and accuracy.	Helps the student decide what to practise next.
Language focus	For each programming language: problems solved, success rate and a label - Strong, Steady, Needs work or Getting started - with plain advice.	Also flags "says one language, solves another". The TPO sees the same panel.
Activity calendar	12-month colour calendar of daily submissions.	
Recent submissions	Last 15 attempts: problem, language, result, run time, memory and date.	
Performance Report page	Full self-report: acceptance rate, results chart, language use, topic mastery, strongest and weakest topics, interview and soft-skills history, drive eligibility, and full submission history with the submitted code.	History can be filtered by Practice, Mock, Daily, Company, Hiring or Talent Pool contests.
Download PDF	One-click "Performance Report" PDF.	Name, college, rating, readiness, acceptance rate, solved count, streak, results by type, languages, topics, recent submissions and placement-drive eligibility.

How the Placement Readiness Score is built

Part (weight)	How it is measured	Note
Interview performance - 35%	Average of the last 5 scored AI mock interviews.	Biggest factor. Counts as 0 until the first interview.
Contest rating - 20%	The contest rating scaled from 1200 (0) to 2200 (100).	Counts as 0 until the first rated contest.
Practice depth and breadth - 20%	Share of Easy, Medium and Hard problems solved (hard counts most) plus how many topics were touched.	
Consistency - 15%	Share of the last 7 days on which the student solved at least 3 problems.	
Academic standing - 10%	CGPA and number of backlogs.	Set by the college.

Practice Arena

A large library of coding problems solved in a real online code editor with instant results.

Feature	What it does	Good to know
Problem library	Browse problems with difficulty (Easy / Medium / Hard), topic tags, company tags and acceptance rate. A tick marks solved problems.	10 per page. Search by title, topic or company; filter by difficulty or company.
Code editor	Professional editor with colours, adjustable font size, a Reset button and the shortcut Ctrl/Cmd + Enter to run.	Code is auto-saved per problem and language in the student's own browser.
19 languages	C++, Java, Python 3, Python 2, JavaScript, TypeScript, C#, C, Go, Kotlin, Swift, Rust, Ruby, PHP, Dart, Scala, Elixir, Erlang, Racket.	Starter code is provided for each.
Run	Tries the code on the sample examples only.	Not saved and never counted. Up to 20 runs a minute.
Submit	Official attempt on the full set of tests. Result: Accepted, Wrong Answer, Compile Error, Runtime Error or Time Limit Exceeded, with run time and memory.	Counts towards solved score, streak and readiness. Up to 10 submits a minute; code up to 64 KB.
Hints	Reveal hints one at a time.	No penalty.
Company-wise prep	A drive's "Prepare" page can open the arena showing only problems recommended for that company.	Problems also show "Asked at" company badges.
Stats strip and Topic Ladder	Problems solved, solved this week, streak, acceptance rate, and the 6 most-practised topics.	
My Submissions	Every attempt with verdict, language and date; open any past attempt to read the submitted code.	Practice keeps the latest attempt per problem per day.
Daily limit by plan	Free plan: 1 new problem a day. Expert: 10. Grandmaster and every college plan: unlimited.	Run is never limited.

Contests and leaderboards

Timed, scored and proctored coding rounds, plus rankings.

Feature	What it does	Good to know
Contest list	Contests grouped as Live Now, Upcoming and Past, with live countdowns.	Types: Daily, College Mock, Company, Hiring, Talent Pool. A student sees only the contests meant for them (their college, or an invited company).
Register and start	Register in one click; withdraw any time before the start. Problems stay hidden until the contest starts.	Registration is open until the contest ends.
Scoring	Each problem carries points and is all-or-nothing: full points only when every test passes.	Daily Challenge: 3 problems (100 + 200 + 300 points).
Penalty tie-break	Equal scores are ranked by time taken: minutes to each correct solve plus 10 minutes for each earlier wrong attempt.	Lower is better.
Live contest leaderboard	Rank, name, score and penalty for everyone registered. After results: rating change.	Refreshes when the tab is opened.
Daily Challenge	A new rated contest every day, 7-8 PM IST, created automatically.	Same problems for all students.

Feature	What it does	Good to know
Contest rating	A skill rating that rises or falls with each rated contest, shown as a 1-7 star level and division.	Starts at 1200. Mock, hiring and Talent Pool contests are never rated.
Global leaderboard	Top 50 students by problems solved (Easy 10, Medium 25, Hard 50 points), with a "You" card showing the student's own rank.	Tabs: All students, My College.
Proctoring	Camera, fullscreen and tab monitoring for every contest problem. See "Fair-play rules" at the end of this guide.	Contests need a laptop or desktop with camera and microphone.

AI mock interviews

Voice interviews in the browser. Each answer is scored straight away by AI.

Feature	What it does	Good to know
Interview list	Shows interviews published for the student: Resume, Available and Completed, with Mock, Practice Round or Shortlisted badges.	Students cannot create their own; interviews come from AptRun, their college's TPO or a hiring partner.
Final Interview tracks	A 3-round hiring pipeline shown as a timeline, set up by the AptRun team.	The next round unlocks only after the qualifying score of the previous round.
Interview flow	Each question is read aloud, the student gets 10 seconds to prepare, then answers by speaking within the question's time limit (default 3 minutes).	Question types: Technical, Behavioural, HR, Situational, Aptitude.
Review before submit	The student can edit the transcript, listen to the recording and re-record as often as needed before submitting.	A submitted answer cannot be changed.
Typed fallback	If the microphone or speech recognition is not available, the student can type answers.	Chrome or Edge is recommended for voice.
AI score and feedback	Each answer gets a score out of 100 with a short written comment. The overall score is the average.	A TPO or hiring partner can review and adjust scores; the student sees the updated result.
Result page	Overall score, full transcript, per-answer score and feedback, and playback of the student's own recordings.	One attempt per interview; progress is saved if the student leaves.
Proctoring	Camera, microphone and fullscreen are required; 3 strikes lock the student out.	Only the owner of the interview (TPO or company) can reinstate.
Limits by plan	Free plan: 1 free practice interview, ever. Expert: 3 a day. Grandmaster: 10 a day. College plans: unlimited.	Real company and final-round interviews are never limited.

Soft Skills tests

Timed multiple-choice tests on aptitude, reasoning, English and workplace judgement. Marked instantly.

Feature	What it does	Good to know
Test list	Cards for every test the student may take, with question mix, minutes, question count, best score and attempts.	Tests come from AptRun, the student's college (Campus Mock) or a hiring partner.
Four question types	Quantitative Aptitude, Logical Reasoning, Verbal / English, Situational Judgement.	All multiple choice with 4 options.
Taking the test	One countdown for the whole test; move freely between questions; answers save automatically; unanswered questions count as wrong.	Default 45 minutes, pass mark 60%. Auto-submits at time-up. No negative marking.
Retakes	Retakes are allowed unless the test sets a limit.	Each retake is labelled Attempt #n.
Result and review	Score, Passed / Below Target, score per category, and every question with the correct answer and an explanation.	
Proctoring	Camera, microphone and fullscreen; 3 strikes end the test and the attempt cannot count as a pass.	

Learning Centre

Self-paced communication practice: vocabulary, listening, speaking and reading.

Feature	What it does	Good to know
Learning Centre hub	Shows total practice sessions, best speaking score, day streak and words mastered, with a card for each module.	
Vocabulary Sprint	A 3-minute daily sprint of up to 12 questions drawn from 160 interview and workplace words in 8 decks. Words return just before the student would forget them.	Question types grow harder: meaning, find the word, fill the blank, type the word. Daily goal: 10 answers. Weak-word drill, searchable word bank, word of the day, pronunciation button.
AI quick quiz	AI writes a fresh 6-question quiz on any topic the student types.	Missed words are saved for later review (up to 300).
Listening Lab	24 ready lessons (8 Beginner, 9 Intermediate, 7 Advanced) in 3 formats: comprehension, conversation and dictation.	Practice mode: replay freely, captions, speed control. Exam mode: audio plays at most twice. Pass mark 60%.
Listening feedback	Instant score, question review with explanations, and accuracy bars for skills such as main idea, numbers and details; recommends the next lesson.	
Make my own lesson (AI)	AI writes a listening lesson on the student's own topic.	
Speaking Practice	The student reads a passage aloud (26 ready passages, or one the AI writes on their topic) and is scored on clarity, fluency and accuracy.	Pass mark 60. Pace check (110-160 words a minute), filler-word and pause counts, word-by-word view and coaching tips. Recordings are not stored.
Reading Hub (Articles)	Technical articles grouped by topic, read in order. Articles are marked read automatically.	Topic progress bars show what is finished.

Feature	What it does	Good to know
Free trial on the free plan	Free-plan students get one free try of each AI feature (speaking, AI passage, AI lesson, AI quiz). The ready-made library content is unlimited for everyone.	Expert, Grandmaster and college plans: no cap.

Placement drives and Talent Pool

Following campus drives and getting noticed by hiring companies.

Feature	What it does	Good to know
Upcoming Placement Drives	Cards of the drives opened for the student's college, with company, role, package range and a live countdown.	Free-plan students do not see drives; Expert, Grandmaster and college-plan students do.
Eligibility check	Each drive shows Eligible or Not Eligible with exact reasons (CGPA, backlogs, branch).	Based on the data the college holds; the student is told to ask the TPO to correct errors.
Prepare page	Company overview, hiring rounds, eligibility, terms, previous-year questions (filter by year and type) and recommended practice problems.	
Status tracking	After the placement cell registers the student, they can follow their stage.	Registered, Online Test, Technical Interview, HR Round, Offer Extended, Offer Accepted, Rejected, Withdrawn. Registration is done by the TPO.
Talent Pool	Students who score 90% or more (default) in an AptRun Talent Pool test can choose to be visible to hiring companies.	Visibility is the student's choice and can be switched off any time. Companies never see email or phone.
Company activity	Student sees every company that showed interest, scheduled an HR interview or hired them, and can confirm or decline interviews.	Needs the Grandmaster plan (or a college plan) to join the pool.

Hack Arena (hackathons)

A full-screen arena to join hackathons run by AptRun or hiring partners.

Feature	What it does	Good to know
Discover hackathons	Browse by status (Live, Registration open, Upcoming, Past), format (online / in person / hybrid), host and theme.	Open to every student for browsing.
Hackathon page	Overview, prizes and judging criteria, schedule, rules and FAQs, announcements, results and a project gallery (opens after the deadline).	
Register solo or in a team	Go solo, create a team or join with an 8-character invite code.	Team size and capacity are set by the host.
Project editor	One shared project per team: title, pitch, description, repository, demo and video links, tech tags. Save draft, then submit.	Can be edited until the deadline.
Results	Rank, score out of 100, marks for each criterion and the judges' written feedback; podium and leaderboard.	
My hackathons	Everything joined, grouped as Live, Coming up, Being judged and Completed.	Taking part needs the Grandmaster plan or a college plan.

Project Lab

Real-world software projects built in a browser-based VS Code workspace and reviewed by AptRun.

Feature	What it does	Good to know
Project catalogue	Browse projects by category and level, each with stack, hours and milestones.	Students without access can preview but not start.
Statement of Work	A professional client brief for each project, downloadable as a PDF.	Each download is stamped with the student's name.
Browser workspace	A full coding environment in the browser with terminal, git, databases and live preview of the running app.	80 workspace hours a month; up to 3 projects at a time; files are kept between sessions.
Milestones	A checklist the student ticks off while building.	
"You write the code" rule	Pasting code copied from outside the workspace is blocked, so the work is the student's own.	Reviewers can see a short authorship summary.
Submit and review	The student submits the code; an AptRun reviewer scores it out of 100 with written feedback, or asks for changes.	Needs the Grandmaster plan. Not part of the standard college plans; can be arranged on request.

What each plan includes

Every student starts free. A college licence unlocks almost everything for all of its students.

Feature	Free (Coder)	Expert	Grandmaster	College plan
Coding problems a day	1	10	Unlimited	Unlimited
AI mock interviews	1 free try, ever	3 a day	10 a day	Unlimited
Learning Centre AI features	1 free try each	Unlimited	Unlimited	Unlimited
Learning Centre library, articles	Unlimited	Unlimited	Unlimited	Unlimited
Contests, rating, leaderboards, Soft Skills, reports	Yes	Yes	Yes	Yes
Placement drives	No	Yes	Yes	Yes
Hack Arena - take part	Browse only	Browse only	Yes	Yes
Talent Pool - join	No	No	Yes	Yes
Project Lab	No	No	Yes	On request

Good to know. When a college holds an active AptRun licence, every student at that college follows the college plan. If the licence ends, students return to their own plan. Current prices are available from your AptRun contact.

PART 2

For Colleges

Everything the Training & Placement Officer (TPO) and Section Coordinators can do: bring the whole batch onto AptRun, run mock tests and interviews, track every student's readiness, manage campus drives and download reports.

2

7 ready-made placement reports

5 parts in every readiness score

3 assessment tools: contests, interviews, tests

1 login per coordinator, per section

Getting started for a college

How a college is set up and how students and staff get their logins.

Feature	What it does	Good to know
College account	The AptRun team creates the college account and the TPO login and emails the TPO a temporary password.	At first sign-in the TPO confirms their email with a 6-digit code and chooses their own password (8+ characters).
College licence	The college holds one licence that covers every student on the roster. Students under it get unlimited practice and mock interviews, placement drives, Hack Arena and Talent Pool.	Standard: up to 500 students. Pro Campus: up to 2,000. Academic Enterprise: unlimited. Sizes can be customised. Project Lab is not part of the standard plans.
Plan status	The home screen shows the licence state: active, renews soon (14 days or less), demo with days left, or no active plan.	With no active plan, new students cannot be added; existing students keep working. Plans are changed by the AptRun team.
Who sees what	A TPO sees only their own college. A Section Coordinator sees only their own section.	No college can see another college's students, tests or reports.
Student logins	Students are added one by one or by uploading a spreadsheet. Each new student is emailed a one-time password.	Students sign in and set their own password on first use.
Profile and settings	Name, photo, phone verification, change password, see and sign out other devices, light or dark theme.	

Placement Command Center (home screen)

One page that shows the whole batch and what needs attention. Every figure is calculated live.

Feature	What it does	Good to know
Four headline numbers	Cohort size, students placed (offer accepted) with placement rate, average readiness score with count of placement-ready students, and live drives.	
Placement target	The TPO sets a season goal (placement % and deadline) and sees a progress ring, "N more placements to go" and days left.	

Feature	What it does	Good to know
Placement funnel	Registered, Shortlisted, Interviewed, Offered and Accepted counts, with conversion % and the biggest drop-off stage.	Fills as stages are recorded in Campus Drives.
Campus drives panel	Upcoming and recent drives with date, package range and how many students are eligible.	
Needs your attention	An automatic to-do list: applications stuck in a stage for over 5 days, offers with no follow-up for over 5 days, and eligible students not yet registered for an open drive.	Shows "You're all caught up" when clear.
Recruiters this season	Top 5 companies by accepted offers with highest and average package.	
Section performance	Every section ranked by average readiness, with student count and coordinator name, email and phone.	A "No coordinator" badge shows sections without one.
Cohort readiness	Split of Placement Ready / In Progress / Needs Training with counts and %, plus average readiness for each branch.	
Recent placement wins and packages	Latest accepted offers (student, company, role, branch, package) with season totals, and a chart of offers by package band.	Bands: under 5, 5-10, 10-15, 15-20 and 20+ LPA.
Quick links	Student cohort, coordinators, mock contests, mock interviews, soft skills and proctoring.	

Students: adding, importing and tracking

The live roster of every student, with readiness, practice and eligibility on each row.

Feature	What it does	Good to know
Add one student	Pop-up form: name and email (required), roll number, branch, section, CGPA, backlogs, phone, parent phone.	Creates the login and emails the password at once.
Bulk import by spreadsheet	Download the CSV template, fill it and upload; the whole batch is created in the background.	Columns: name, email, roll number, branch, section, CGPA, backlogs, phone, parent phone. Only name and email are required. File up to 5 MB.
Safe re-upload	Re-uploading the same file is safe: existing students are updated with the new details, with no second email.	This is how CGPA, section or branch are corrected.
Row checks and import history	Bad rows are skipped with a reason and good rows still import. A history shows progress, students added and failed rows with the reason.	Seat limit, invalid email, CGPA outside 0-10 and duplicate emails are caught.
Student cohort table	Search by name, roll number or email. Filter by branch, section, readiness level, coding language and practice status. Sort by readiness, problems solved, last practice or CGPA.	Pages of 25, 50 or 100. Filters are remembered during the session.
Headline cards	Total cohort, practising this week, eligible for active drives, needs training, blocked accounts.	Click a card to filter the table.
Sections at a glance	A tile per section with average readiness and coordinator.	Click a tile to filter.
Practice engagement	Counts students as Active (practised in last 7 days), Slipping (8-21 days), Dormant (over 21 days), Not started or Not activated (never signed in).	Quickly shows who has stopped practising.

Feature	What it does	Good to know
Coding languages	Which languages the batch really solves in, how many are struggling, and who says one language but solves in another.	Helps plan workshops.
Quick chips	"Eligible only", "At risk (below 60%)", "Struggling in a language", plus a readiness range.	
Table columns	Student, branch, section, CGPA, backlogs, readiness ring, 7-day practice score, practice status, languages, tier, blocked flag, eligibility for active drives.	
Student profile drawer	A quick view with readiness and practice rings, academic details, contact details and parent phone.	Buttons: full activity report, one-page PDF summary.
One-page PDF summary	A printable summary per student.	CGPA, backlogs, readiness, practice, per-language results with Strong / Steady / Needs work, and contact details.
Notify students	Send an email, or a WhatsApp message to the student or parent, to selected students or to everyone matching the filters.	Up to 5,000 per send. Two fixed templates: "General check-in" and "Drive eligibility notice". WhatsApp needs a connected WhatsApp Business account.
Download Excel	Exports exactly the students currently shown.	See "Reports" below for the 29 columns.

360-degree student report

Everything one student has done on AptRun, on one page. Opened from the "Report" button in the cohort.

Feature	What it does	Good to know
Identity and activity	Name, roll number, branch, section, CGPA, backlogs, contact, readiness tier and when the student was last seen.	
Headline cards	Readiness score, contest rating with last change, problems solved by difficulty, current streak and personal best.	
Readiness breakdown	The five weighted parts: interviews 35, contest rating 20, practice 20, consistency 15, academics 10.	Tiers: Placement Ready 75+, In Progress 45-74, Needs Training below 45.
Activity calendar	12-month calendar of daily submissions and practice coverage by difficulty.	
Coding languages	What the student said in onboarding next to what they actually solve, with accuracy and a verdict for each language.	
Contests	Every contest entered: type, date, problems solved, penalty, rating before and after, rank and points. Open any attempt to read the code.	
Mock interviews	Each interview with score, status, company and answers given. The TPO can open the transcript of the college's own mock interviews.	
Placement drives	Every drive the student is tracked in, with stage and offer.	

Feature	What it does	Good to know
Submission history	The latest 80 practice and contest attempts with filters, language filter and a button to read the exact code submitted.	

Reports: what a TPO can download

Seven ready-made reports, built live from current data. Each can be viewed on screen or downloaded. Student reports can be limited to one section.

Good to know. Reports are live snapshots built when the TPO clicks. Placement figures (offers, packages) come from the stages the TPO records in Campus Drives. Phone numbers appear in some exports, so treat them as personal data.

Report	What it is	What is inside
1. Batch Readiness & Academic Report (PDF)	Management summary of the whole batch.	Total students, average CGPA, average readiness, zero-backlog students; readiness-tier table; branch-wise table (students, CGPA, backlogs, readiness); section-wise table.
2. Student Cohort Report (Excel)	One row per student.	Name, email, roll number, branch, section, CGPA, backlogs, readiness score and tier, 7-day practice score.
3. Coding Languages & Progress Report (Excel)	Who practises, how much, in which language, and who struggles.	Per student: practice status, days since practice, solved (easy / medium / hard), main language, languages used, struggling in. Second sheet: per language - students, accepted %, problems solved, students struggling.
4. Company & Drive Directory (Excel)	Every drive mapped to the college.	Company, role, package, date, status, minimum CGPA, maximum backlogs, branches, fully eligible students and total cohort.
5. Eligibility & Compliance Audit (CSV)	Students who fail a drive's CGPA, backlog or branch rule, with the exact reason.	Drive, company, student, roll number, branch, section and reason.
6. Drive Eligibility Funnel (PDF)	A bar-chart block for each drive.	Total cohort, meets CGPA bar, meets backlog limit, meets branch filter, fully eligible.
7. Management Readiness Deck (PDF, one page)	Board-ready summary.	Total students, average readiness, mapped drives, students below 60%, readiness bar and top companies.

More reports, charts and automatic emails

Feature	What it does	Good to know
Snapshot strip	Total students, branches, sections, average CGPA, average readiness and compliance flags at the top of the Reports page.	
Section performance table	Sections ranked best-first with average readiness, average CGPA and coordinator contact. Click a section to filter reports.	
Eligibility at a glance	Every drive with how many students are fully eligible and how many are flagged.	
Recent placements	Latest accepted offers with student, company, role and package.	

Feature	What it does	Good to know
Readiness Analytics page	Charts: placement funnel, branch-wise readiness and practice consistency, branch placement rate, package distribution, and company-wise hiring (offers, average and highest package).	On-screen only.
Student Cohort Excel (full)	29 columns per student plus a languages sheet.	Adds phone, parent phone, eligibility, account status, signed-in yet, practice status, last practised, active days, solved split, main and stated language, struggling in, onboarding answered.
Weekly at-risk email (automatic)	Every week each TPO receives an email with an Excel list of students below 60 readiness, lowest first.	Name, email, roll number, branch, CGPA, backlogs, readiness, tier and practice score.

Mock contests

Private coding practice rounds for the college's own students. They never change a student's public rating.

Feature	What it does	Good to know
Create	Title, description and a start and end time. Saved as a draft.	Students can start any time inside the window.
Choose problems	Pick problems from the AptRun problem bank and set the points for each (default 100).	Problems cannot be removed once the contest has started.
Publish	Makes the contest visible to every student of the college.	Students register themselves.
Live results and finalise	After the end time, "Finalize" locks the ranking. Higher score first, then lower penalty time.	Scoring: points for each fully solved problem; penalty is minutes plus 10 for each wrong attempt.
Participants report	Ranked list with name, roll number, section, score and penalty; open a student to see every attempt and read their code.	Shown on screen.
Automatic proctoring	Every contest problem is proctored: camera, fullscreen and tab monitoring.	See "Proctoring review" below.

AI mock interviews

Private voice-interview practice for the college's students, scored by AI with a human override.

Feature	What it does	Good to know
Create	Title and description. Saved as a draft.	
Questions	Let AI write questions (choose role, difficulty, focus areas, 1-10 questions, key skills) or pick from AptRun's shared question bank.	Review, regenerate or remove any generated question.
Publish	Makes it visible to every student of the college; students start it themselves.	One attempt per student.
Responses review	See every student's status, transcript, audio recording, score out of 100 and feedback for each answer.	Recordings are private to the college and the student.
Override and finalise	Change any AI score, add review notes and finalise the student's overall score.	Overall score is the average of all answers.

Feature	What it does	Good to know
Proctoring	Camera, fullscreen and tab rules with 3 strikes. The TPO sees strikes inside each student's review and can reinstate a locked student.	Scored interviews feed the student's readiness score (35%).

Soft Skills tests

Private multiple-choice tests on aptitude, reasoning, English and situational judgement.

Feature	What it does	Good to know
Create	Title, description, duration (5-240 minutes, default 45) and pass mark (default 60%).	
Add questions	One-click auto-fill by category from the shared bank (up to 100 per category), or have AI write more questions.	Categories: Quantitative Aptitude, Logical Reasoning, Verbal / English, Situational Judgement.
Publish	Visible to every student of the college once at least one question is attached.	Marked instantly and automatically.
Where results appear	Each student's score, per-category result and review are shown to the student and in their Performance Report.	The TPO screen shows how many students have taken each test.

Proctoring review (fair-play monitoring)

A TPO is told when a student is locked out and can review what happened.

Feature	What it does	Good to know
Flagged-sessions list	Every flagged contest attempt of the college with student, section, contest, status and risk level.	Counts for flagged, locked out, in progress and total strikes. Filter by status or section; search by student, roll number or contest.
Violation timeline	Open any row to see each event with time, problem and device address.	Events: left fullscreen, switched tab, developer tools, paste attempt, window lost focus, right-click, tried to leave page.
Reinstate	Lets a locked student continue when the TPO decides it was a false alarm.	The strike history stays on record.
Email alerts	On a lock-out, an email goes at once to every TPO of the college and the student's section coordinator. Students who finish with 1-2 strikes are reported when the contest is finalised.	

Campus drives and placement pipeline

Choose which company drives students see, register students and follow every stage up to the offer.

Feature	What it does	Good to know
Mapped drives	Drives live for the college, grouped Upcoming and Completed, with package, eligibility rules and applicant counts.	Search by company or role.
Available to map	Drives from AptRun's shared catalogue that the college can switch on in one click.	Students then see them straight away.
Pending approvals	Drives proposed by AptRun or a hiring company wait here. The TPO approves or declines.	An email alerts the TPO to each proposal. Students see a drive only after approval.
Create your own drive	For a company visiting only this campus: company, role, package, date and duration, minimum CGPA, maximum backlogs, branches and terms.	Visible only to this college.
Eligibility	Each student is checked automatically against CGPA, backlogs and branch. Students with missing data show as "unknown".	Students see their own result with reasons.
Selection pipeline	Stages: Registered, Online Test, Technical Interview, HR Round, Offer Extended, Offer Accepted, Rejected, Withdrawn. Move any student with a dropdown.	Offer stages ask for the package in LPA. Accepted, Rejected and Withdrawn close the application.
Register eligible students	One click registers every eligible student; or add a single student by name, roll number or email.	Students do not apply themselves.
Export and notify	Download an Excel of a drive's applicants (name, email, roll number, branch, stage, package, last update), or email or WhatsApp all applicants.	Up to 5,000 per send. Messages use fixed templates.

Section Coordinators

Faculty who look after one section each, with their own login.

Feature	What it does	Good to know
Create a coordinator	The TPO enters name, email, section and phone; the coordinator is emailed a login.	One coordinator per section. Only sections that exist in the roster are offered.
Manage	Cards for every coordinator with section, student count and status; edit section or phone; block or unblock.	Coverage ring shows how many sections have a coordinator.
Roster and student reports	The coordinator's own student list with readiness, practice, languages and eligibility, search and filters. Open the full 360-degree report (including code) or a one-page PDF; block or unblock a student's sign-in.	Only the coordinator's own section is visible. Coordinators cannot edit student details or add students.
Section reports and notices	Section Readiness & Academic Report (PDF, with a "needs attention" list below 60) and Section Cohort Report (Excel). Send notices to the section and review its proctoring flags.	Can reinstate a student after a false alarm.

PART 3

For Hiring Partners

3

Everything a company can do: post openings, propose them to partner colleges, test and interview candidates with proctored assessments and AI interviews, discover pre-tested talent and measure hiring results.

11	3	1	Opt-in
tools in the Hiring Hub	ways to test: code, voice, aptitude	login per company, fully separate data	Talent Pool, by student choice

Getting started for a company

Accounts are set up by the AptRun team; every company sees only its own data.

Feature	What it does	Good to know
Company account	The AptRun team creates the company and the hiring lead's login after a conversation. The lead is emailed a temporary password and sets their own on first sign-in.	No self-sign-up for companies.
One company per login	Everything on screen belongs to that one company: its openings, tests, interviews, candidates and hackathons.	Other companies' data is never visible.
What a company can and cannot see	A company never sees a college's full student list. It sees only people connected to its own work: candidates it adds, people who take its tests or interviews, and students who chose to join the Talent Pool.	Colleges only appear as a directory with student count and tier.

Hiring Command Center (home screen)

A live picture of every opening and candidate.

Feature	What it does	Good to know
Headline numbers and funnel	Open job openings, active pipeline, hired and average time to hire, plus a funnel from Registered to Shortlisted, Interviewed, Offered and Accepted.	Time to hire = days from entering the pipeline to an accepted offer.
Needs your attention	Candidates stuck in a stage for over 5 days and offers with no follow-up for over 5 days.	
Job opening cards	Up to 4 openings with status, applicant count, close date and package range. New companies see a 3-step guide.	
Recent hires and sources	Last 5 accepted offers, and where candidates came from: invited by you, existing platform students, or other.	
First-time guide	Three steps: post an opening, propose it to colleges, screen and hire.	

Partner Colleges and Job Openings

Post a role, then take it to the colleges you want to hire from.

Feature	What it does	Good to know
Partner Colleges directory	A list of every active college with city, tier, student count and your proposal status (pending, approved, declined).	Search by name; filter by tier. No student names or rosters are shown.
Post a Job Opening	Four parts: the role (title, role, package range), schedule (close date, test duration, interview date), who can see it, and terms and conditions (up to 20,000 characters).	Starts as a draft.
Status	Draft, Published, Completed or Cancelled; change any time.	
Who can see an opening	**Invite only** (default): visible to people you add or to approved colleges. **All candidates**: any registered student can join once it is published.	
Propose to colleges	Pick one or more colleges and send. Optionally override eligibility: minimum CGPA, maximum backlogs, branches.	The college's TPO is emailed and approves or declines; students see the opening only after approval.
Interview reminder	A banner appears when the interview date is within 5 days, suggesting a Mock and a Final AI interview.	
Opening list	Status tabs with counts, search, campus chips (Approved / Pending / Declined) and applicant counts.	

Candidates and hiring pipeline

For each opening, see everyone in the pipeline and move them to an offer.

Feature	What it does	Good to know
Pipeline board and list	Counts for every stage: Registered, Online Test, Technical Interview, HR Round, Offer Extended, Offer Accepted, Rejected, Withdrawn. Click a stage to filter the list of names, branch, email, phone and offered package.	Search by name, email or phone.
Move candidates	Move a person to any stage with a dropdown.	Offer stages ask for the package in LPA. Accepted, Rejected and Withdrawn are final.
Add a candidate	Add one person by name and email (phone optional). New people get a login by email; existing users get an invitation.	
Bulk import	Upload a CSV (name, email, phone) up to 5 MB, with a downloadable template and a history showing added and failed rows.	
From assessments	Add top scorers of an assessment straight into the pipeline with a minimum-score tick.	

Coding assessments and proctoring

Timed coding tests in the same online editor and automatic judge used for contests.

Feature	What it does	Good to know
Create an assessment	Pick a job opening, a title, description and a start and end time. Choose problems from the shared problem bank and set the points for each.	19 programming languages.
Publish and invite	Invite candidates already in the pipeline. They see the test on their dashboard. Open-to-all openings and approved colleges can also register themselves.	No email is sent for an assessment invite.
Scoring	Points for each fully solved problem. Ties are ranked by time taken plus 10 minutes for each wrong attempt before the right answer.	Company tests never change a student's public rating.
Results and finalise	A ranked table with score, penalty and a minimum-score tick that adds people to the pipeline. "Finalize" locks the ranking after the end time.	Tiles: submitted, top score, in pipeline, selected.
Proctoring review	Every flagged attempt on the company's own tests with strikes, risk level and a timeline of events. Reinstate a locked candidate after a false alarm.	See "Fair-play rules" for what is monitored.

AI interviews

Voice interviews scored by AI, reviewed and overridden by the company.

Feature	What it does	Good to know
Create	Choose the job opening, a Mock (practice) or Final (evaluated) round, title and description.	Practice rounds are clearly labelled to candidates and are never part of the decision.
Questions	Let AI write questions (role, difficulty, focus areas, 1-10 questions, skills) or pick from the shared bank.	
Shortlist	Invite pipeline candidates. They are emailed and the interview appears on their dashboard.	Always invite-only.
Review responses	Per candidate: transcript, audio playback, a 0-100 score and written feedback for each answer, and proctoring strikes.	You can change any score and add notes.
Finalise	Locks the overall score: the average of all answers.	Reinstate a candidate who was locked by mistake.

Soft Skills tests

Multiple-choice screening on aptitude, reasoning and English.

Feature	What it does	Good to know
Create and fill	Title, duration (5-240 minutes) and pass mark; one-click fill from the question bank by category, or AI-written extra questions.	Categories: Quantitative, Logical Reasoning, Verbal / English, Situational Judgement.
Who can take it	Students of colleges that have approved one of your openings. Proctored and marked automatically.	You see the number of attempts per test; per-candidate results are shown to the student.

Talent Pool

Browse students who scored very high on AptRun's own tests and chose to be visible.

Feature	What it does	Good to know
Browse and filter	Cards with score, college, skills, rating and profile completeness. Search by name or skill; filter by college and minimum score (80+, 90+, 95+).	24 per page; fullest profiles first.
Candidate profile	Score, branch, CGPA, rating, readiness score, bio, skills, LinkedIn and GitHub links, and resume download.	**Email and phone are never shown.**
Express interest	Opens an engagement; the student is emailed.	
Send a message	Up to 2,000 characters, delivered through AptRun.	
Schedule an HR interview	Date, online link or in-person address and notes; the student confirms or declines.	
Hire	Records a direct hire with optional package. The student then disappears from other companies' searches.	
My Engagements	Everything the company has started, with counts for active, interviews, hired and closed.	

Hackathons

Host a hackathon to meet students you may hire.

Feature	What it does	Good to know
Create and publish	Basics, format and team size, audience (all students or specific colleges), schedule, prizes (up to 12), judging criteria, tracks, rules and FAQs, resources, and a cover image.	Judging weights must total 100.
Registrations	Searchable list with name, email, handle, college, branch and team; export to CSV.	Hosts see participants' email addresses.
Judging, results and updates	Score each submitted project 0-10 per criterion with written feedback, disqualify with a reason, then publish results. Post announcements to participants.	Ranks are strict; ties go to the earlier submission. Students take part in the Hack Arena.

Hiring Reports

One live report for the company's own pipeline, with an Excel download.

Feature	What it does	Good to know
Headline numbers	Total candidates, hired, average time to hire and offer-accept rate.	
Funnel and sources	Registered to Accepted with the biggest drop-off stage, and where candidates came from: invited by you, existing platform students, other.	
By job opening	Candidates, hires, hire rate and average package per opening.	
Recent hires and offer packages	Latest accepted offers and a chart of packages in bands (under 5, 5-10, 10-15, 15-20, 20+ LPA).	
Excel download	Workbook with Hiring Summary, Recent Hires and By Opening sheets.	Covers the company's own pipeline only.

PART 4

For Everyone

The rules and facts that apply across AptRun: fair-play monitoring, the coding environment, privacy, the emails AptRun sends and how a college gets started.

4

3 strikes	19	0	5 MB
end a proctored attempt	programming languages	video uploaded or stored	student spreadsheet upload

Fair-play rules (proctoring)

Contests, AI interviews and Soft Skills tests run in a locked-down mode. Practice is never proctored.

Feature	What it does	Good to know
Where it applies	Every contest problem (college and company), every AI interview, and every Soft Skills test.	Not used in Practice, Learning Centre, hackathons or Project Lab.
Before starting	The student allows camera and microphone, sees their own preview and confirms.	Needs a laptop or desktop with a recent Chrome, Edge or Firefox.
Strikes and logged events	Leaving fullscreen, switching tab or window, and opening developer tools each count as a strike, with a warning such as "Warning 1/3". Paste attempts, right-click, losing window focus and trying to close the page are only logged (paste and right-click are blocked).	3 strikes end the attempt. Logged events are shown to reviewers but are not strikes.

Feature	What it does	Good to know
When a student is locked	**Contest:** the code on screen is submitted automatically and access ends. **AI interview:** the attempt stops and the owner can reinstate. **Soft Skills:** answers so far are marked and the attempt cannot count as a pass.	The lock is held by the server, so refreshing does not reset strikes.
Camera privacy	Camera and microphone stay on the student's own device. They are not uploaded, stored or watched by staff.	There is no face recognition. Contest screens show a faint watermark with the student's name, roll number and time.
What reviewers see	A timeline of events with time, problem, device address and whether it counted as a strike.	No video or screenshots.
Who reviews and who is told	TPO: all flagged contests in the college. Coordinator: own section. Company: its own tests. On a contest lock-out an email goes at once to the college's TPOs and the section coordinator.	TPO, coordinator or company can reinstate a locked student after a false alarm.

Coding environment and device needs

Nothing to install. AptRun runs in the browser.

Feature	What it does	Good to know
19 programming languages	C++, Java, Python 3, Python 2, JavaScript, TypeScript, C#, C, Go, Kotlin, Swift, Rust, Ruby, PHP, Dart, Scala, Elixir, Erlang and Racket.	Same list for practice, contests and company tests.
Real code execution	Code is compiled and run on AptRun's own secure servers against real test cases, never simulated.	Samples are visible; the full set of tests stays hidden.
Fair-use limits	Up to 20 test runs and 10 submissions a minute per student; code up to 64 KB; a busy system shows queue position.	Contest work is judged ahead of practice.
Devices	Practice, learning and reports work on laptops, tablets and phones. Proctored attempts need a laptop or desktop with camera and microphone.	AI interview voice works best in Chrome or Edge, with typed answers as a fallback.
Internet and display	Always online, with no offline mode. The site can be added to a phone's home screen. Light, dark or follow-the-device theme.	

Privacy: who can see what

Plain rules about student data.

Feature	What it does	Good to know
College staff	The placement cell (TPO) and the student's section coordinator can see profile, scores, readiness, interview history, submitted code and proctoring reports for their own college or section.	Stated in the Privacy Policy.
Hiring partners	A company sees only people connected to its own work: candidates it adds, people who take its tests or interviews, and students in the Talent Pool.	Never a college roster.
Talent Pool	Opt-in. A student appears only after scoring above the cut-off and agreeing; they can hide again at any time.	Email and phone are never shown; all contact goes through AptRun.

Feature	What it does	Good to know
Interview recordings	Spoken interview answers and transcripts are stored privately and can be played back by the student and by the college or company that owns the interview.	Speaking Practice recordings are not stored.
AI helps, people decide	AI scores interview and speaking answers and drafts questions. A TPO or company can override interview scores.	Scores are decision aids, not guarantees.
Account safety	Passwords are stored in protected form, sign-in attempts are rate-limited, each role sees only its own area, and accounts can be blocked.	New accounts must confirm their email and choose a password at first sign-in.
Data requests	To access, correct or delete data, write to support@mellowvault.com. Some records are kept on behalf of the college.	Privacy Policy and Terms are on the website.

Emails AptRun sends

Sent automatically in the background.

Audience	Emails	Note
Students	Account ready (when a college adds them); welcome (self sign-up); password-reset code; payment receipt; placement-cell notices sent by the TPO; Talent Pool emails (qualified, company interest, HR interview, hire, message); added to a hiring pipeline; shortlisted for an interview.	
TPOs	Account ready; new drive proposal from a company; proctoring report on a lock-out or flagged attempt; weekly Excel of students below 60 readiness.	
Section coordinators	Account ready; proctoring reports for their section.	
Hiring partners	Account ready; a candidate accepted or declined an HR interview.	
Not sent by email	Contest reminders, results, drive stage changes and weekly student digests. Students see these in their dashboard.	WhatsApp notices work once a WhatsApp Business connection is switched on.

Getting a college started

From first conversation to first report.

Step	What happens	Note
1. Talk to us	Use "Book a demo" on the website or email the team.	support@mellowvault.com
2. We set up your college	AptRun creates the college, the licence and the TPO login. The TPO signs in, confirms their email and sets a password.	
3. Bring in students and staff	Upload one spreadsheet or add students one by one; each student gets a login by email. Give each section a coordinator login.	Up to 5 MB per file.
4. Run and track	Approve or create campus drives, publish mock contests, interviews and tests, then use the Command Center, readiness reports and the weekly at-risk email.
